Typescript: Index signature is missing in type

🔍 casting, typescript ✅ Resolved

TS wants us to define the type of the index. For example, to tell the compiler that you can index the object with any string, e.g.

`myObj['anyString']`, change:

```
interface myInterface {  
  myVal: string;  
  (1 more line was trimmed)
```

Property 'value' does not exist on type 'EventTarget'

🔍 angular, typescript, properties ✅ Resolved

In my case, I had:

```
const handleChange = (e: ChangeEvent) => {  
  doSomething(e.target.value);  
  (1 more line was trimmed)
```

And the issue was that I did not provide a type argument to

`ChangeEvent` so that it knows `e.target` was an `HTMLInputElement`.

JSC_REDECLARED_VARIABLE_ERROR when using gulp closure compiler plugin

🔍 javascript, typescript, gulp, google-closure-compiler

Try `--env CUSTOM` or `--isolation_mode IIFE`. I ran into this when compiling code that conflicted with browser interfaces like `Node`.

My code should be detecting if a string has currency symbols, but it will not detect £

🔍 javascript, arrays, for-loop, if-statement ✅ Resolved

If you don't want to use regex, just check if the string includes a symbol, increment a counter, and return whether or not there was exactly 1 match:

```
let testA = "$£50",  
    testB = "£50",  
  (17 more lines were trimmed)
```

Problem calling functions within case and if loop

🔍 linux, bash, unix

Per @vgersh99, `overwrite()` and `restoreDir()` make use of the `$1` variable which refers to each function's first argument. You could back the top-level `$1` variable up to a global like `FILE_LOCATION` and reference that, or simply pass it to your functions as needed: ...
