Typescript: Index signature is missing in type

🔗 casting, typescript ✅ Resolved

TS wants us to define the type of the index. For example, to tell the compiler that you can index the object with any string, e.g.

`myObj['anyString']`, change:

```
interface myInterface {  
  myVal: string;  
  (1 more line was trimmed)
```

to:

```
interface myInterface {  
  [key: string]: any;  
  (2 more lines were trimmed)
```

How get real char code from an emoji in JavaScript?

🔗 javascript, emoji, fromcharcode ✅ Resolved

`String.codePointAt()` and `String.fromCodePoint()` are made for this, though it is also possible to specify a UTF-16 `charCode` in legacy browsers using surrogate keypairs (see the discussion here).

```
let emoji = "👋",  
    charCode = emoji.charCodeAt(),  
    (11 more lines were trimmed)
```

Property 'value' does not exist on type 'EventTarget'

🔗 angular, typescript, properties ✅ Resolved

In my case, I had:

```
const handleChange = (e: ChangeEvent) => {  
  doSomething(e.target.value);  
  (1 more line was trimmed)
```

And the issue was that I did not provide a type argument to `ChangeEvent` so that it knows `e.target` was an `HTMLInputElement`. Even if I manually told it that `target` was an input element (e.g.

`const target: HTMLInputElement = e.target`), the `ChangeEvent` still didn't know that made sense. The solution was to do:

```
// add type argument  
const handleChange = (e: ChangeEvent) => {  
  (2 more lines were trimmed)
```
